

Triangles are always one step ahead and again they are the 1st in the North-West to purchase the new:

DUET LASER HAIR REDUCTION MACHINE.

So many people have hair problems and don't know why or how to reduce the hair. They think they only have available traditional methods of: waxing, threading, plucking, shaving or the use of a hair removal cream. They don't know why they even have this hair problem; some even think this makes them less feminine. Rather than seeking professional help or advice most people are so embarrassed that they just try to remove the unwanted hair in the easiest and most private way possible, usually using one of the above methods. Unfortunately all this does is make the temporary hair into a permanent hair that is both thicker and darker making the problem far worse.

Many people are not aware of laser hair reduction. They have either not heard of this or do not fully understand what and how it works. The most popular questions asked are:

- How does it work?
The duet laser machine heats up the colour present in the hair. This creates heat which will in turn destroys the hair shaft and bulb; this stops the hair from re growing.
- Is it permanent?
Hair has 3 growth cycles. If a hair is treated in its first cycle and the hair has created enough heat to destroy the bulb then that hair cannot regrow again.
- What is the difference compared to IPL hair reduction?
The Duet Laser Machine uses a diode laser beam; this is a focused intense beam which targets the pigment in the hair follicle. IPL is not laser but intense pulsed light which spreads out a light beam which targets more top layer of the skin giving excellent effects for skin rejuvenation, anti ageing but not ideal for hair reduction.
- Does it hurt and how quick is the treatment?
The Duet has a large hand piece together with a new unique technology vacuum suction effect. This enables a much lower intensity of laser beam to be used giving the same permanent hair reduction effect as an older style laser but without the same sensitivity. Due to the size of the head it only takes 20 minutes to the whole of the legs or 5 minutes for a bikini or even 4 minutes for an underarm.
- What skin and hair types can it work on?
Due to the type of laser beam used all skin types even afro Caribbean skin can be treated with the new Duet Laser machine
- How many treatments will it take to get rid of a problem area?

If there are no hormonal or medical problems present and the client returns at the correct times prescribed by their therapist the most common number of treatments for any area is between 4 -7.

- Are there any after effects?

This can vary from client to client from nothing to the area being slightly red. Side effects are rare but sometimes there can be some dehydrated skin (dry patches) and very rarely temporary pigmentation.

- Why is your machine different and why should I come to your salon.?

The Duet has two hand pieces allowing us to treat all areas and skin types giving quick effective hair reduction with reduced if any sensitivity. Triangles have been open for 21 years and the owners are World Championship Winners in both Hair and semi Permanent Makeup. They have been invited and appeared on television and had write ups in virtually every magazine in the Country from Hello, OK, Cosmopolitan and much more. They are a very professional clinic who only deals with the most up to date and effect products and machinery always putting the client first. Their clinic has recently had a complete refurbishment giving the most luscious surroundings giving the clients comfort and relaxation. Triangles give the results they promise at a price which is affordable and comparable to the marketplace.
